

Math worksheet on 'Order of Operations Example - Multiply, Divide with Parentheses (Level 1)'. Part of a broader unit on 'Order of Operations - Practice'

Learn online: app.mobius.academy/math/units/order_of_operations_practice/

1

Which operation should be done first in this equation?

$$(8 \div 6) \times 7 = ?$$

a	b
6×7	$8 \div 6$

2

Which operation should be done first in this equation?

$$9 \div (2 \times 6) = ?$$

a	b
2×6	$9 \div 2$

3

Which operation should be done first in this equation?

$$6 \div (2 \times 7) = ?$$

a	b
2×7	$6 \div 2$

4

Which operation should be done first in this equation?

$$8 \div (3 \times 4) = ?$$

a	b
$8 \div 3$	3×4

5

Which operation should be done first in this equation?

$$4 \div (5 \times 3) = ?$$

a	b
$4 \div 5$	5×3

6

Which operation should be done first in this equation?

$$(8 \div 5) \times 3 = ?$$

a	b
5×3	$8 \div 5$

7

Which operation should be done first in this equation?

$$(4 \div 5) \times 3 = ?$$

a	b
5×3	$4 \div 5$
