mobius

Math worksheet on *'Order of Operations Introduction - Exponents vs Basic Operators (Level 1)'*. Part of a broader unit on *'Order of Operations - Practice'*

1 Given that exponents should be done before you add, subtract, multiply, or divide, which operation should be done first in this equation?

$$6 - 7 \times 2^3 = ?$$

a	b	c
$6 - 7$	7×2	2^3

2 Given that exponents should be done before you add, subtract, multiply, or divide, which operation should be done first in this equation?

$$5 \div 6 - 7^3 = ?$$

a	b	c
7^3	$6 - 7$	$5 \div 6$

3 Given that exponents should be done before you add, subtract, multiply, or divide, which operation should be done first in this equation?

$$9^2 \div 4 + 7 = ?$$

a	b	c
$4 + 7$	$9 \div 4$	9^2

4 Given that exponents should be done before you add, subtract, multiply, or divide, which operation should be done first in this equation?

$$7 + 5 \div 3^2 = ?$$

a	b	c
$7 + 5$	$5 \div 3$	3^2

5 Given that exponents should be done before you add, subtract, multiply, or divide, which operation should be done first in this equation?

$$7 - 3 + 6^2 = ?$$

a	b	c
$7 - 3$	6^2	$3 + 6$

6 Given that exponents should be done before you add, subtract, multiply, or divide, which operation should be done first in this equation?

$$9 - 3 + 4^2 = ?$$

a	b	c
$3 + 4$	4^2	$9 - 3$

7 Given that exponents should be done before you add, subtract, multiply, or divide, which operation should be done first in this equation?

$$4 + 7^2 - 2 = ?$$

a	b	c
$4 + 7$	$7 - 2$	7^2
