2

What would this approach calculate for you?

Put the numbers in order and choose the middle one

- a** The average of a set of numbers
- b** The most commonly occurring number in a set of numbers
- c** The middle number of a set of numbers when ranked in order
- d** The distance between the highest and lowest of a set of numbers

1

What would this approach calculate for you?

Subtract the smallest number from the biggest number

- a** The average of a set of numbers
- b** The most commonly occurring number in a set of numbers
- c** The middle number of a set of numbers when ranked in order
- d** The distance between the highest and lowest of a set of numbers

3

What would this approach calculate for you?

Add up all the numbers and divide by how many numbers there are

- a** The middle number of a set of numbers when ranked in order
- b** The most commonly occurring number in a set of numbers
- c** The distance between the highest and lowest of a set of numbers
- d** The average of a set of numbers

4

What would this approach calculate for you?

Count how many of each number there are and choose the one that is most common

- a** The middle number of a set of numbers when ranked in order
- b** The average of a set of numbers
- c** The most commonly occurring number in a set of numbers
- d** The distance between the highest and lowest of a set of numbers
