1

How would you calculate this measurement?

The distance between the highest and lowest of a set of numbers

- a** Subtract the smallest number from the biggest number
- b** Put the numbers in order and choose the middle one
- c** Count how many of each number there are and choose the one that is most common
- d** Add up all the numbers and divide by how many numbers there are

2

How would you calculate this measurement?

The middle number of a set of numbers when ranked in order

- a** Count how many of each number there are and choose the one that is most common
- b** Subtract the smallest number from the biggest number
- c** Add up all the numbers and divide by how many numbers there are
- d** Put the numbers in order and choose the middle one

3

How would you calculate this measurement?

The most commonly occurring number in a set of numbers

- a** Put the numbers in order and choose the middle one
- b** Subtract the smallest number from the biggest number
- c** Add up all the numbers and divide by how many numbers there are
- d** Count how many of each number there are and choose the one that is most common

4

How would you calculate this measurement?

The average of a set of numbers

- a** Subtract the smallest number from the biggest number
- b** Add up all the numbers and divide by how many numbers there are
- c** Put the numbers in order and choose the middle one
- d** Count how many of each number there are and choose the one that is most common
