1

The distance between the highest and lowest of a set of numbers

How would you calculate this measurement?

a	Count how many of each number there are and choose the one that is most common
b	Add up all the numbers and divide by how many numbers there are
c	Subtract the smallest number from the biggest number
d	Put the numbers in order and choose the middle one

2

The most commonly occurring number in a set of numbers

How would you calculate this measurement?

a	Add up all the numbers and divide by how many numbers there are
b	Subtract the smallest number from the biggest number
c	Put the numbers in order and choose the middle one
d	Count how many of each number there are and choose the one that is most common

3

The average of a set of numbers

How would you calculate this measurement?

a	Put the numbers in order and choose the middle one
b	Count how many of each number there are and choose the one that is most common
c	Subtract the smallest number from the biggest number
d	Add up all the numbers and divide by how many numbers there are

4

The middle number of a set of numbers when ranked in order

How would you calculate this measurement?

a	Put the numbers in order and choose the middle one
b	Subtract the smallest number from the biggest number
c	Count how many of each number there are and choose the one that is most common
d	Add up all the numbers and divide by how many numbers there are
