app.mobius.academy/math/units/geometry_angles_and_transformations_practice/

1

In geometry, what's the name for the transformation that spins a shape around a point?

a

Rotation

b

Revelry

2

In geometry, what's the name for the transformation that moves a shape without spinning or turning it?

a

Translation

b

Tabloid

3

In geometry, what's the name for the transformation that makes a mirror image of a shape?

a

Radical

b

Reflection

4

In geometry, what's the name for the transformation that makes a mirror image of a shape?

a

Reflection

b

Ramshackle

5

In geometry, what's the name for the transformation that moves a shape without spinning or turning it?

a

Toblerone

b

Translation

6

In geometry, what's the name for the transformation that moves a shape without spinning or turning it?

a

Thermal

b

Translation

7

In geometry, what's the name for the transformation that makes a mirror image of a shape?

a

Resting

b

Reflection
